

PHASE 2

CORE PRODUCT REVIEW

A working FitCalgary product layer built on the tested Flutter, Go and PostgreSQL foundation.

READY FOR CLIENT REVIEW

September 2026 | acceptance candidate

WHAT THIS MILESTONE ESTABLISHES

The core product workflows now run through supported client surfaces and the Go/PostgreSQL service path: directory, pricing, clubs, events, profiles, boards, submissions, private evidence review, moderation and notifications.

FLUTTER / DART VERIFIED 20 tests + analysis	GO SERVICES VERIFIED tests / vet / build	POSTGRESQL VERIFIED 7 migrations / 35 tables	AUTH + ROLES TESTED server enforced
IOS SIMULATOR build + launch	ANDROID EMULATOR build + AAB	WEB VERIFIED type / lint / build	APPLE WATCH SIMULATOR build + launch

CENTRAL ACCEPTANCE PATH

submission -> private evidence -> correction or approval -> verified result -> official board -> notification

Development fixtures are isolated from production content. Physical devices, live provider credentials, approved Client data and store submission remain outside this local verification claim.

The product in use.

The Phase 2 build keeps the recognizable cream, black and coral editorial system while making the principal user journeys real and connected.

Gym detail + saved state

Normalized price comparison

Athlete profile + history

Submission + private evidence

Verified official placement

Clubs / events operations

One product path, one source of truth.

The client surfaces share the same protected service contracts, authorization rules and production-shaped data model.

VERIFICATION SNAPSHOT

Flutter	analysis + 20 tests	PASS	Go	tests + vet + build	PASS
Database	fresh init + migration/read-write path	PASS	Cross-platform	iOS / Android / web / Watch	PASS

No production secrets are committed. Provider credentials, final content and physical-device/store verification are explicitly separated from local evidence.

The required journeys are covered.

The matrix below records the Phase 2 position using the exact status vocabulary: COMPLETE + VERIFIED, BLOCKED_EXTERNAL or INCOMPLETE.

COMPLETE + VERIFIED	
1 Account, profile, saved gym and reload	PASS
2 Directory, filters and structured comparison	PASS
3 Admin publish to client visibility	PASS
4 Community result to board and profile	PASS
5 Submission -> evidence -> correction -> approval -> rank -> inbox	PASS
6 Role/object denial and immediate revocation	PASS
7 Moderation, preferences and notification outbox	PASS
8 Shared client data path and Watch companion	PASS
BLOCKED_EXTERNAL	
Live Keycloak / SMTP / Google / Apple credentials	EXTERNAL
FCM/APNs provider delivery credentials	EXTERNAL
Client-approved production content and ranking decisions	EXTERNAL
Physical devices, signed stores, hosting and DNS	EXTERNAL
INCOMPLETE	
No material Phase 2 acceptance item is currently classified as incomplete.	
Release-only work is deliberately reserved for Phase 3 and is not presented as Phase 2 completion.	

Ready for the next release phase.

WHAT IS COMPLETE

The Phase 2 core product is materially complete and verified in the local development/staging environment. The private repository contains the acceptance candidate and the evidence package is regenerated for review.

WHAT REMAINS EXTERNAL

Client-approved gyms, pricing, clubs, events and ranking decisions; production identity/provider credentials; hosting, storage, notification and store accounts; and physical-device access. These are dependencies, not hidden unfinished implementation.

PHASE 3 NEXT

Release configuration, approved data import, physical-device QA, signed archives/AAB, provider verification, performance/security review, store preparation, deployment and handoff documentation.

PHASE 2 - READY FOR CLIENT REVIEW

This package shows the working product, the tested service path and the precise boundaries that remain external or belong to final release preparation. Client acceptance is not assumed.

Acceptance candidate: 3f858ba | final status: a35e28e
