

PHASE 1 - FOUNDATION REVIEW

Foundation + product shell verified.

READY FOR CLIENT REVIEW

Phase 1 established the production architecture and incorporated the Client's recognizable FitCalgary product direction into a working Flutter shell. It is ready for review within the Developer's control; production credentials, final Client data, and physical-device validation remain separate.

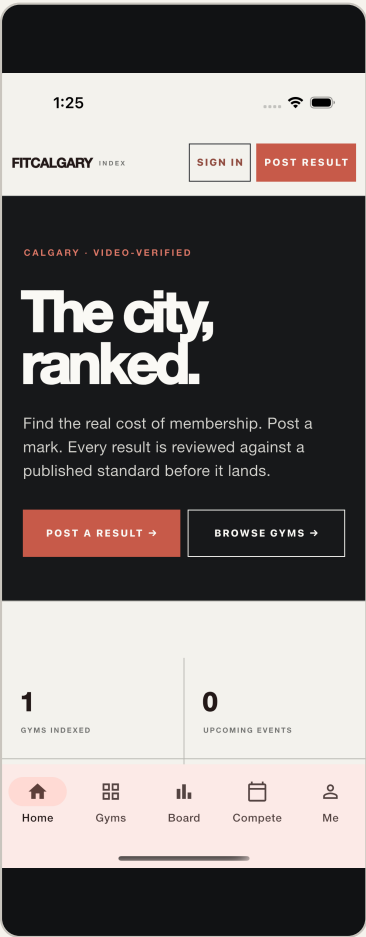

Client product UI VERIFIED	Go backend VERIFIED	PostgreSQL VERIFIED	iOS SIMULATOR VERIFIED	Android EMULATOR VERIFIED
Web BUILD + RUN VERIFIED	Apple Watch SIMULATOR VERIFIED	Authentication FOUNDATION VERIFIED	Authorization TESTED	Physical devices LATER VERIFICATION

CLIENT REVIEW BOUNDARY

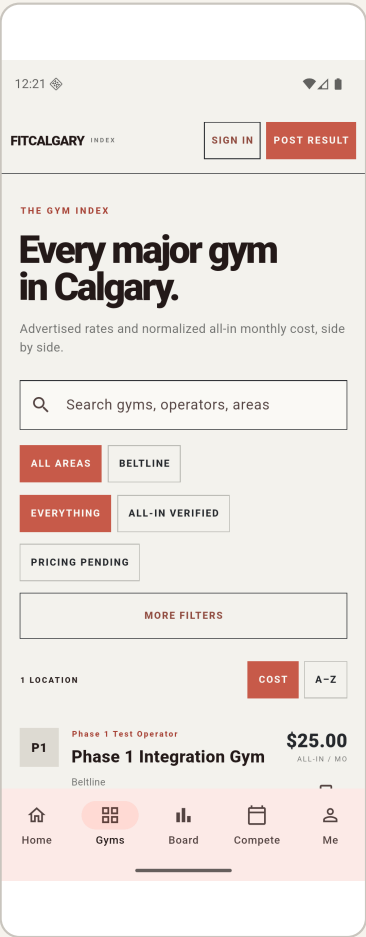

Simulator and development verification are complete where stated. No physical-device or production verification is claimed.

Recognizable FitCalgary, built and running.

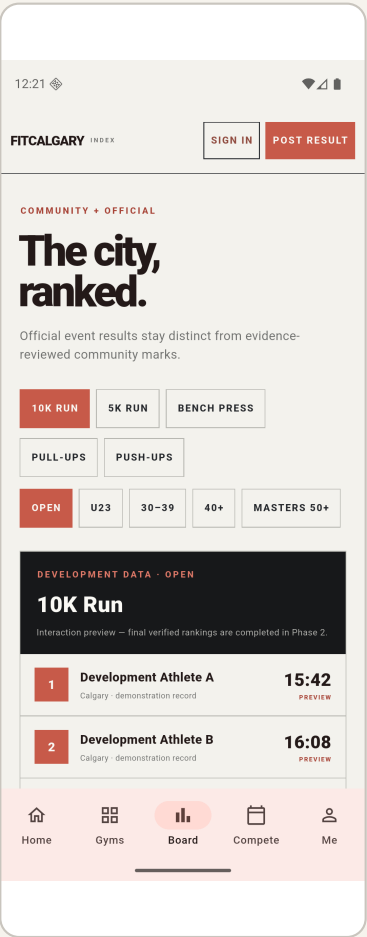

Real captures: Client visual identity, five-area navigation, live development data, responsive web and watch companion.

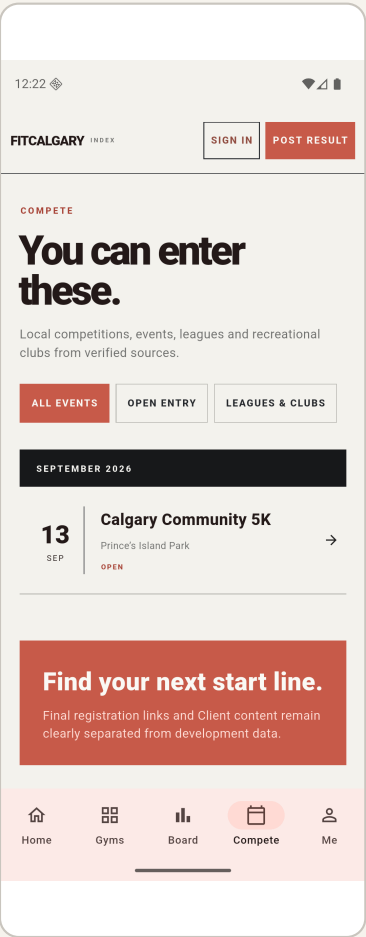

iOS - Home
Simulator verified.

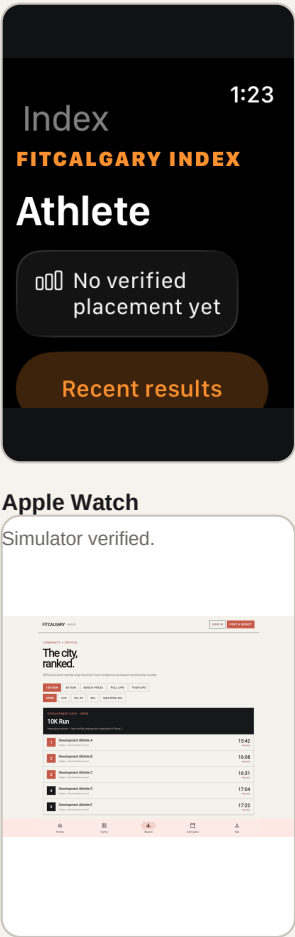

Android - Gyms
Live Go/PostgreSQL data.

Android - Board
Working filter shell.

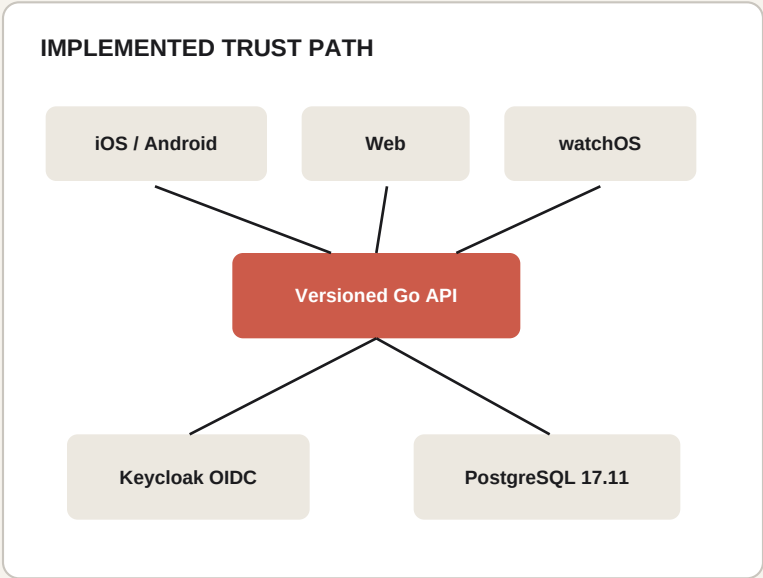

Android - Compete
Published event shell.

Flutter web
Responsive shell running.

The visible product is connected to the real foundation.

VERIFIED DURING PHASE 1

Application -> backend -> database connection	PASS
Database setup and migrations	PASS
Authentication and session foundation	PASS
Server-side roles and permission protection	PASS
iOS simulator build and run	PASS
Android emulator build and run	PASS
Android release build	PASS
Flutter web build and run	PASS
Apple Watch simulator build and run	PASS
Automated foundation tests	PASS

CORE INTEGRATION VERIFIED

Flutter app -> Go backend -> PostgreSQL

The fresh development test started from a clean database, launched the service, and showed the resulting gym and normalized price inside the running Flutter application. Authentication and authorization were tested separately, including rejection of an ordinary user from protected administration access.

What is intentionally next - and what is needed.

A. PHASE 1 FOUNDATION + SHELL

Ready for Client review

B. WHAT I WILL NEED FROM YOU

- Final gym/pricing data and source information
- Club and event information
- Final leaderboard and verification rules
- Production account and credential access as integrations require it

C. LATER VERIFICATION

iOS, Android and watchOS are verified in simulator/emulator environments only.

Physical devices, production services and final Client data remain later validation work. These inputs do not all need to be supplied immediately.

NEXT - PHASE 2: CORE PRODUCT

After explicit authorization, Phase 2 builds the agreed V1 workflows on this foundation: gym/index pricing, clubs and events, athlete profiles, leaderboards, submissions, judge verification, admin/content controls, notifications, and the remaining agreed product functionality.

PHASE 1 - READY FOR APPROVAL

The Phase 1 technical foundation and Client-recognizable product shell are ready for review. The preceding pages show what is working, what was tested, and which items intentionally remain for the continuing project.

If you are satisfied, please confirm Phase 1 acceptance so development can proceed to Phase 2 - Core Product.
