

FINAL V1

RELEASE REVIEW

Complete source, verified workflows and controlled store-build paths awaiting production accounts.

READY FOR RELEASE CONNECTION

September 13, 2026 | Final V1 review

FINAL POSITION

The agreed FitCalgary V1 is implemented and verified within the available development environment. Release identity, signing safeguards and store-build paths are prepared. Real production endpoints, accounts and signing access remain necessary before distribution, as detailed on page 5.

CORE PRODUCT VERIFIED end-to-end workflow	GO + DATABASE VERIFIED tests / migrations	WEB + ADMIN BUILD PASS responsive routes	SECURITY VERIFIED roles / private data
IOS SIGNING STEP Apple access required	ANDROID SIGNING READY production config required	APPLE WATCH SIMULATOR build + launch	PUBLISHING FINAL STEP accounts / hosting

APPROVED CATALOG

273 gyms / 743 sport clubs / 531 competitions / 1,547 supplied records

Temporary public website: deployment authorization is the remaining web-publishing action.

The FitCalgary experience is connected.

Discovery, comparison, community participation, athlete verification and administration share one service and data model, now presented through the refined FitCalgary layered visual system.

Gym directory + approved catalog

Structured all-in price comparison

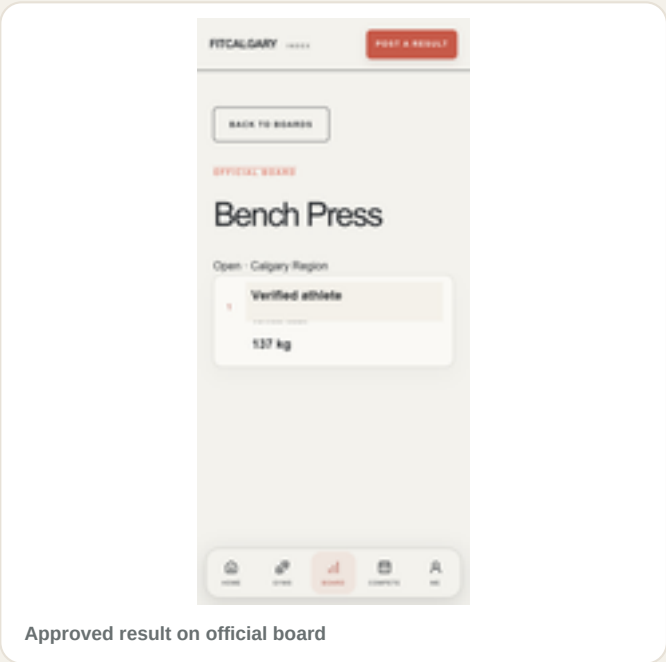

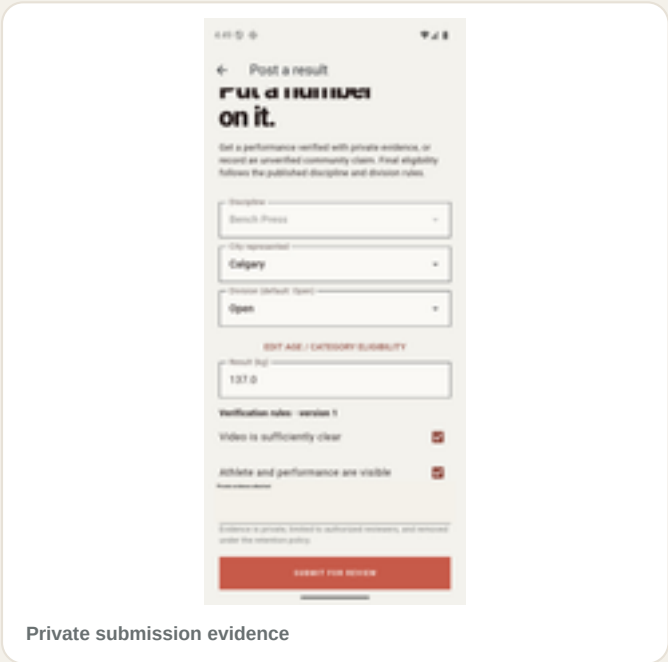

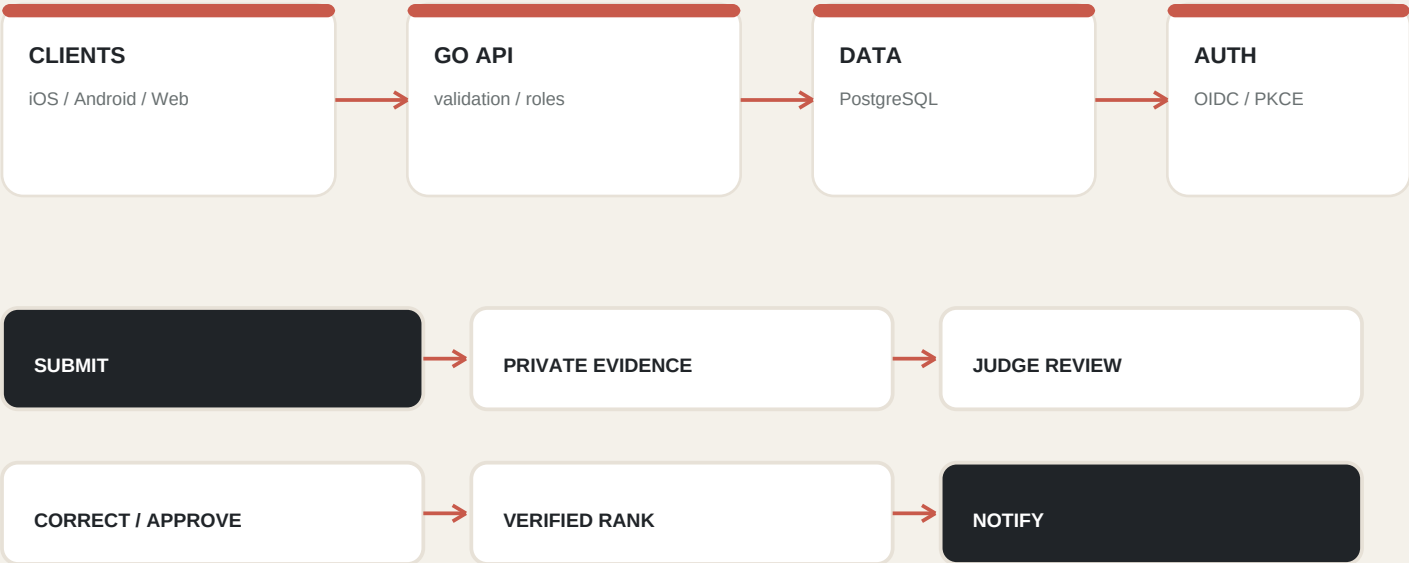

Sport clubs + participation routes

Competitions + event discovery

One protected path from athlete to ranking.

The accepted workflow operates through the application, Go service and PostgreSQL with server-side authorization at every protected step.

Built and tested across the supported system.

The final local verification separates source, test and build evidence from external deployment, signing and physical-device claims.

OPERATIONS

Deploy / backup / rollback docs

PASS

Security and reliability: environment-gated release configuration, no committed production secrets, server-enforced roles and ownership, safe errors, bounded requests, health/readiness checks, database migration and recovery procedures.

The product is prepared; account connection is next.

Source, verified development builds, data, tests and operating documentation are ready. The remaining actions connect real production services, create signed store artifacts and publish through authorized accounts.

PUBLIC WEBSITE

Authorize the temporary hosting account, then publish the prepared web build to its HTTPS address.

CLIENT DOMAIN

Connect the Client-selected FitCalgary or FitAlberta domain after DNS access and the final primary-domain decision are supplied.

LIVE SERVICES

Connect hosting, PostgreSQL, private storage, Keycloak, email and notifications using the prepared production configuration.

APP DISTRIBUTION

Connect Apple signing and real production configuration, then create and upload the verified IPA and AAB through App Store Connect and Google Play; complete physical-device and store review checks.

FINAL V1 - READY FOR RELEASE CONNECTION

The complete FitCalgary V1 source, verified workflows and controlled release paths are prepared. Public hosting, production-service activation, signed mobile artifact generation and store upload are the remaining distribution actions.

Simulator and emulator evidence remains separate from later physical-device and store approval.
