

FINAL V1

DELIVERY REVIEW

Release-ready source, verified product workflows and a documented path to production deployment.

READY FOR FINAL CLIENT REVIEW

September 12, 2026 | Final V1 review

FINAL POSITION

The complete agreed FitCalgary V1 is implemented and verified within the available development environment. Deployment, production provider connection, signed store distribution and physical-device certification require Client accounts, credentials or hardware listed on page 5.

CORE PRODUCT VERIFIED end-to-end workflow	GO + DATABASE VERIFIED tests / migrations	WEB + ADMIN BUILD PASS responsive routes	SECURITY VERIFIED roles / private data
IOS SIMULATOR archive ready	ANDROID EMULATOR release AAB built	APPLE WATCH SIMULATOR build + launch	PRODUCTION EXTERNAL accounts / signing

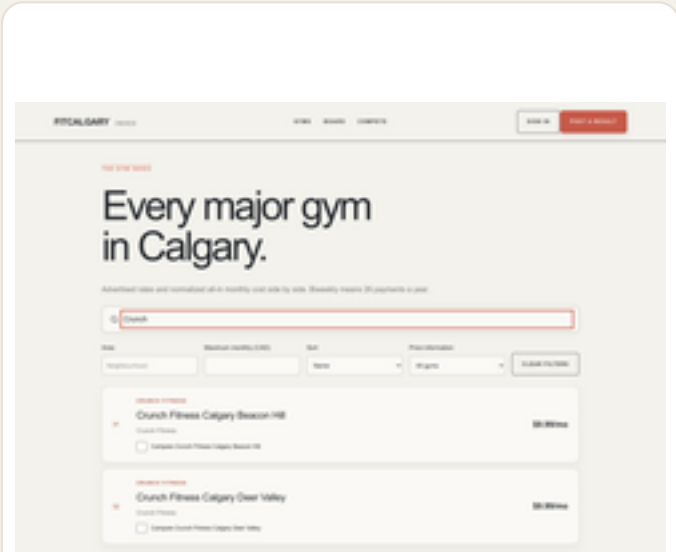

APPROVED CATALOG

273 gyms / 743 sport clubs / 531 competitions / 1,547 supplied records

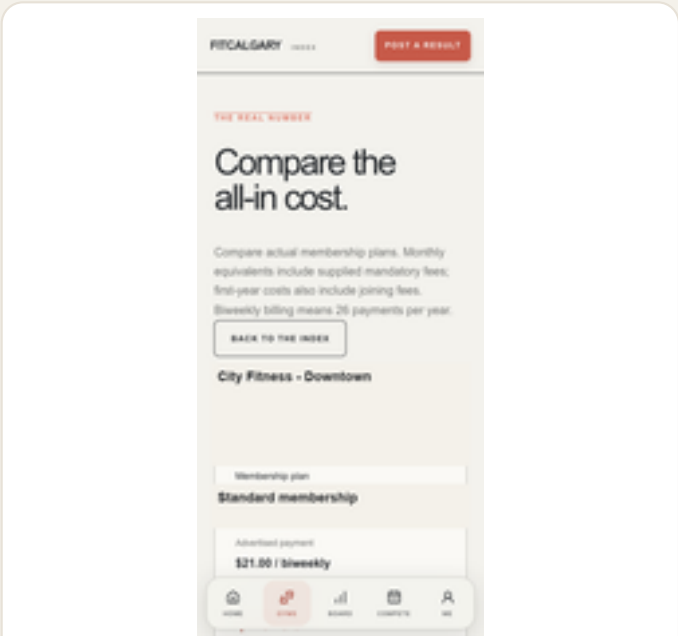

No simulator result is presented as physical-device verification, and no external production service is presented as deployed.

The FitCalgary experience is connected.

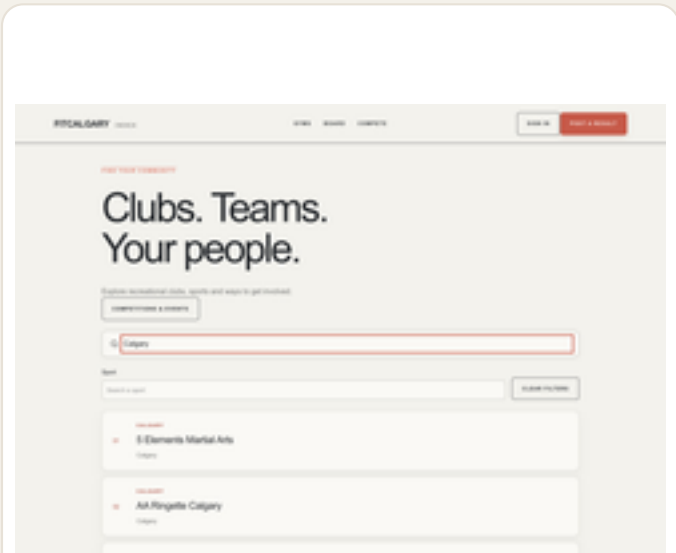

Discovery, comparison, community participation, athlete verification and administration share one production-shaped service and data model.

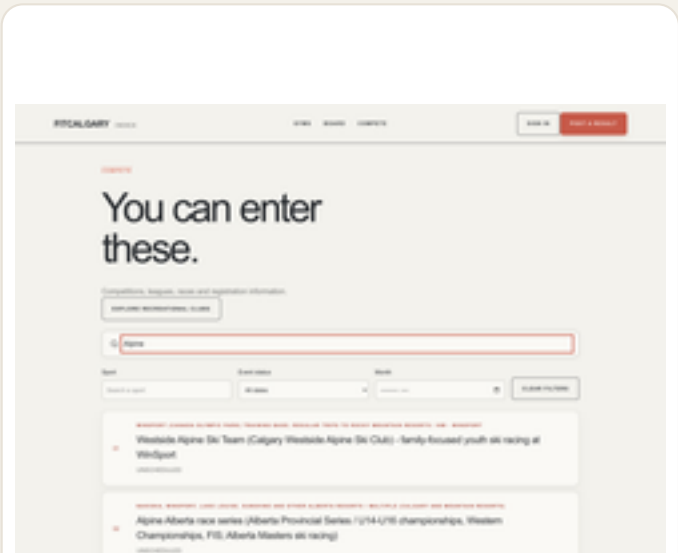

Gym directory + approved catalog

Structured all-in price comparison

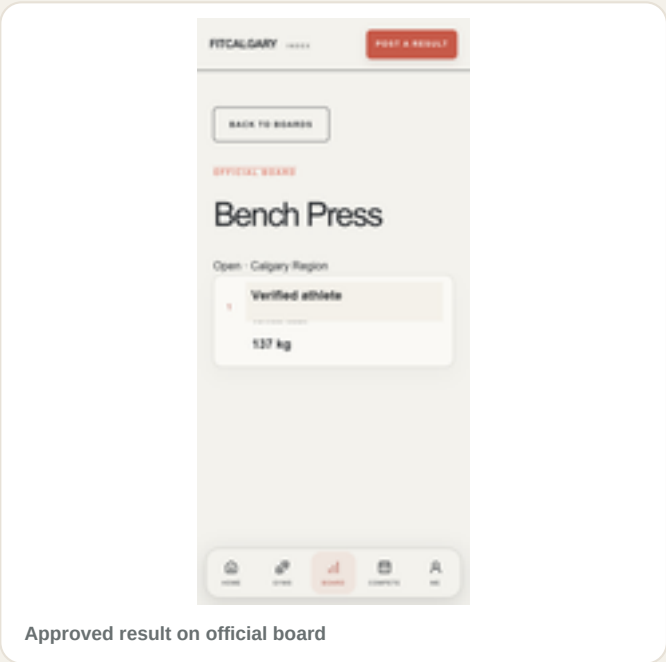

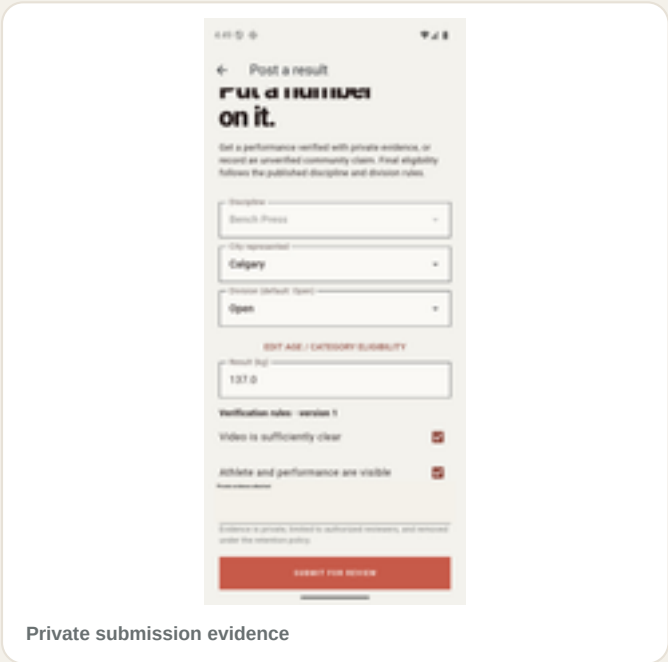

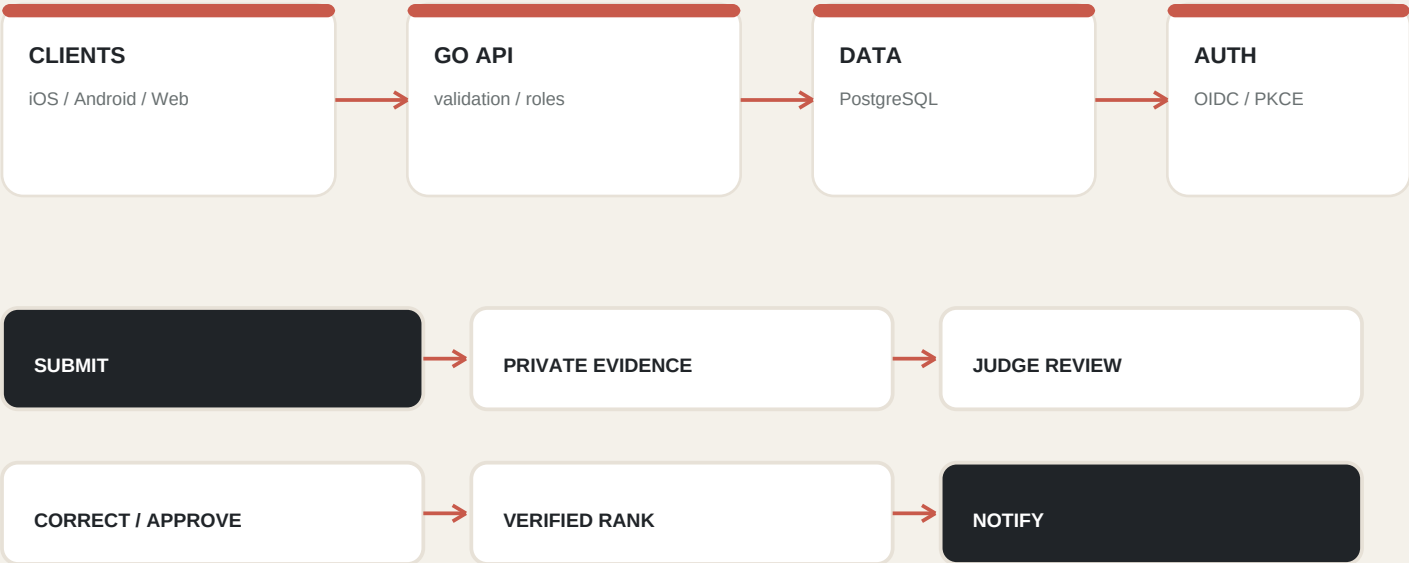

Sport clubs + participation routes

Competitions + event discovery

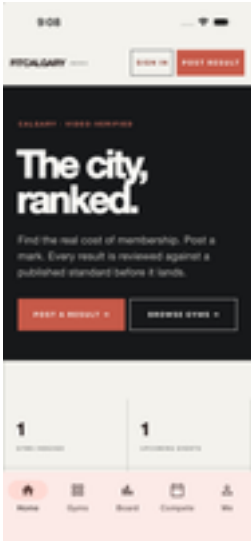

One protected path from athlete to ranking.

The accepted workflow operates through the application, Go service and PostgreSQL with server-side authorization at every protected step.

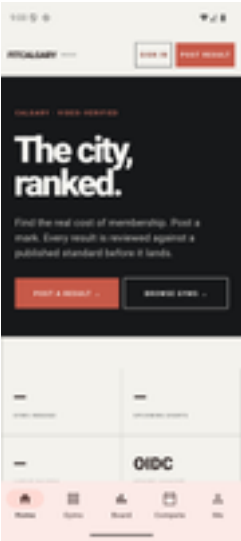

Built and tested across the supported system.

The final local verification separates source, test and build evidence from external deployment, signing and physical-device claims.

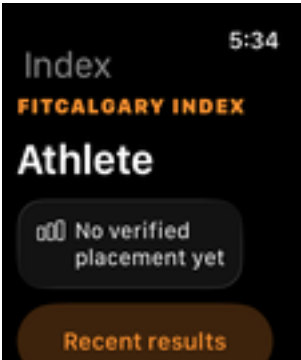

iOS simulator

PASS

Security and reliability: environment-gated release configuration, no committed production secrets, server-enforced roles and ownership, safe errors, bounded requests, health/readiness checks, database migration and recovery procedures.

Ready to connect to Client production accounts.

Source, builds, data, tests and operating documentation are ready. The remaining items require Client-controlled services, credentials, legal decisions or physical hardware.

PRODUCTION INFRASTRUCTURE

Hosting, DNS/TLS, managed PostgreSQL, private object storage and backup destination.

IDENTITY AND DELIVERY PROVIDERS

Production Keycloak realm, SMTP, Google Sign-In, Sign in with Apple, FCM and APNs credentials.

STORE AND SIGNING ACCESS

Apple Developer/App Store Connect, Google Play Console, signing certificates and upload keys.

FINAL EXTERNAL VALIDATION

Representative iPhone, Android phone and Apple Watch; approved privacy, legal, business and store information.

FINAL V1 - READY FOR CLIENT REVIEW

The complete FitCalgary V1 source and verified local release candidate are ready for final Client review and contractual handoff. Production deployment, signing, physical-device QA and store submission can proceed when the listed Client-controlled access is supplied.

No external approval, production deployment or physical-device result is being overstated.
